R

Dear Chuck,

All is proceeding well. I'm quite optimistic about being able to terminate studies in the near future and hope to have everyone back by 1 May. Maupin has become most cooperative and I believe there will be no difficulty.

I received the annual invitation to submit a paper for Radiological Society of North America from Lauriston Taylor. In his letter he mentions that a fourth session is open for the Dec. 54 meeting. What would you and Dr. Bugher think about a series of papers on the experiences out here? I submit the following proposal for Dr. Taylor if it meets with Dr. Bugher's and your approval and security.

1. General problems of fall out.
2. Physical calculation of dose to exposed people.
3. Clinical care of exposed people.
4. Skin lesions.
5. Hematology.
6. FP excretion in animals and man and deposition in animals.

If the above seems reasonable could you take it up with Dr. Taylor? Correspondence from here is rather clumsy.

Please tell Corbie I haven't forgotten him and will complete Upshot-Knothole work when I return.

Sincerely,

E. P. CRONKITE.
